EE23BTECH11063 - Vemula Siddhartha

Question:

If G(f) is the Fourier Transform of f(x), then which of the following are true?

- (a) $G(-f) = +G^*(f)$ implies f(x) is real.
- (b) $G(-f) = -G^*(f)$ implies f(x) is purely imaginary.
- (c) $G(-f) = +G^*(f)$ implies f(x) is purely imaginary.
- (d) $G(-f) = -G^*(f)$ implies f(x) is real.

(GATE 2022 PH Question 26)

Solution:

Symbol	Description
f(x)	Function
G(f)	Fourier Transform of the function $f(x)$
$f^{*}(x)$	Complex Conjugate of $f(x)$
$G^{*}(f)$	Complex Conjugate of $G(f)$
TABLE 4	

GIVEN INFORMATION

$$f(x) \stackrel{\mathcal{F}}{\longleftrightarrow} G(f)$$
 (1)

$$G(f) = \int_{-\infty}^{\infty} f(x) e^{-j2\pi f x} dx \qquad (2)$$

$$\implies G(-f) = \int_{-\infty}^{\infty} f(x) e^{j2\pi fx} dx \qquad (3)$$

$$\implies G^*(f) = \int_{-\infty}^{\infty} f^*(x) e^{j2\pi fx} dx \qquad (4)$$

If $G(-f) = +G^*(f)$, from (3) and (4),

$$f(x) = f^*(x) \tag{5}$$

Hence, f(x) is real.

If $G(-f) = -G^*(f)$, from (3) and (4),

$$f(x) = -f^*(x) \tag{6}$$

Hence, f(x) is purely imaginary.

Therefore, (a) and (b) are true.
